

LUXURY HYGIENE SOLUTIONS

# EXTRA FAST DISSOLVING TISSUE

FOR THE MOST CHALLENGING DRAINS

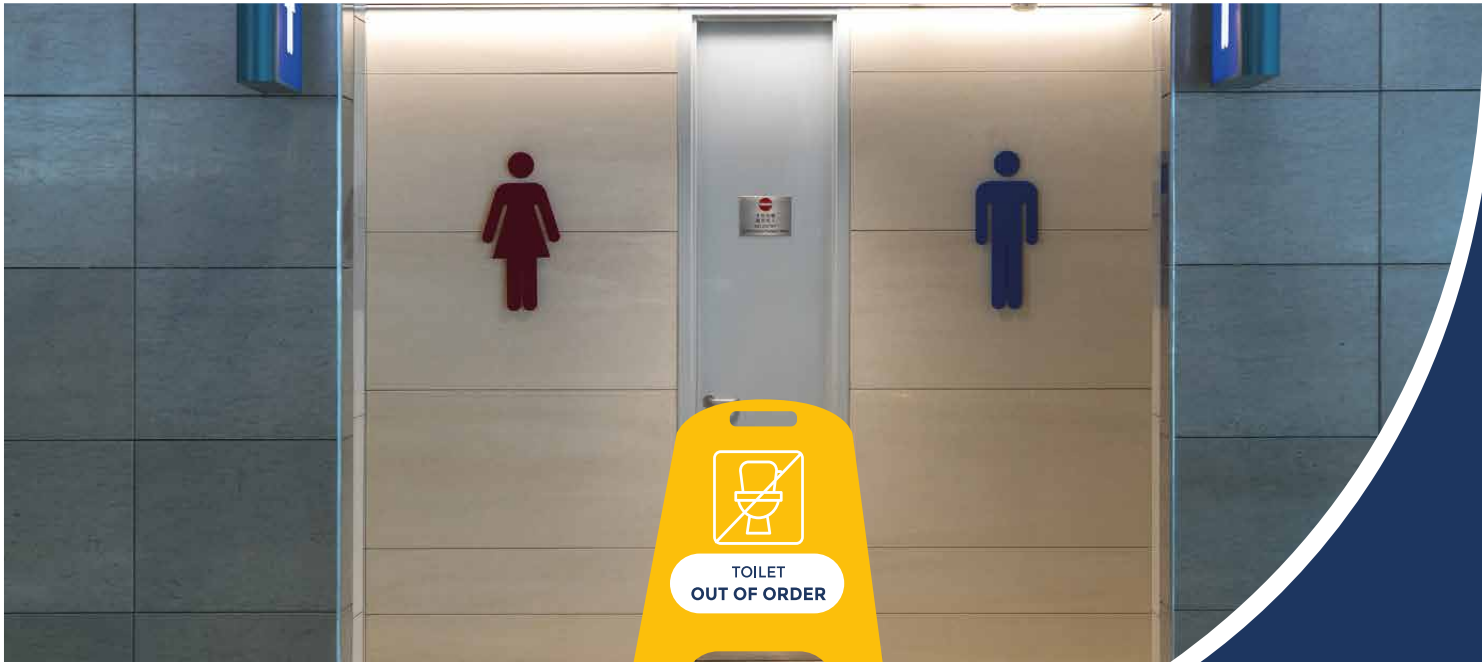

How many times have you found yourself dealing with blockages in the toilet drainpipes?

How many times have you had to incur extraordinary maintenance costs?

How many times were you unable to provide toilet services due to blocked pipes, causing inconvenience and dissatisfaction among your clientele?

If we consider that every year, over 50% of businesses grapple with issues of toilet drain blockages, the answer to these questions is undoubtedly: **very often!**

OUT OF ORDER TOILETS

## THE SOLUTION TO EVERY PROBLEM

Cartiere Carrara has always been committed to continuous research for effective and innovative solutions, dynamically responding to the evolving needs of its customers. Behind every product lies the tangible result of constant commitment that has always enabled the attainment of high-quality products, offering reliable solutions suitable for addressing a wide range of issues.

## OUR CONTROLLED SUPPLY CHAIN

BulkySoft toilet papers are derived from carefully selected raw materials and processed on dedicated transformation lines. Stringent quality controls ensure maximum performance standards over time. Thanks to our controlled supply chain, we can guarantee that all our toilet papers are Fast Dissolving Tissue, meaning they not only meet but exceed AFNOR Q34-020 regulatory standards, which establish a maximum time of two minutes for cellulose disintegration upon contact with water.

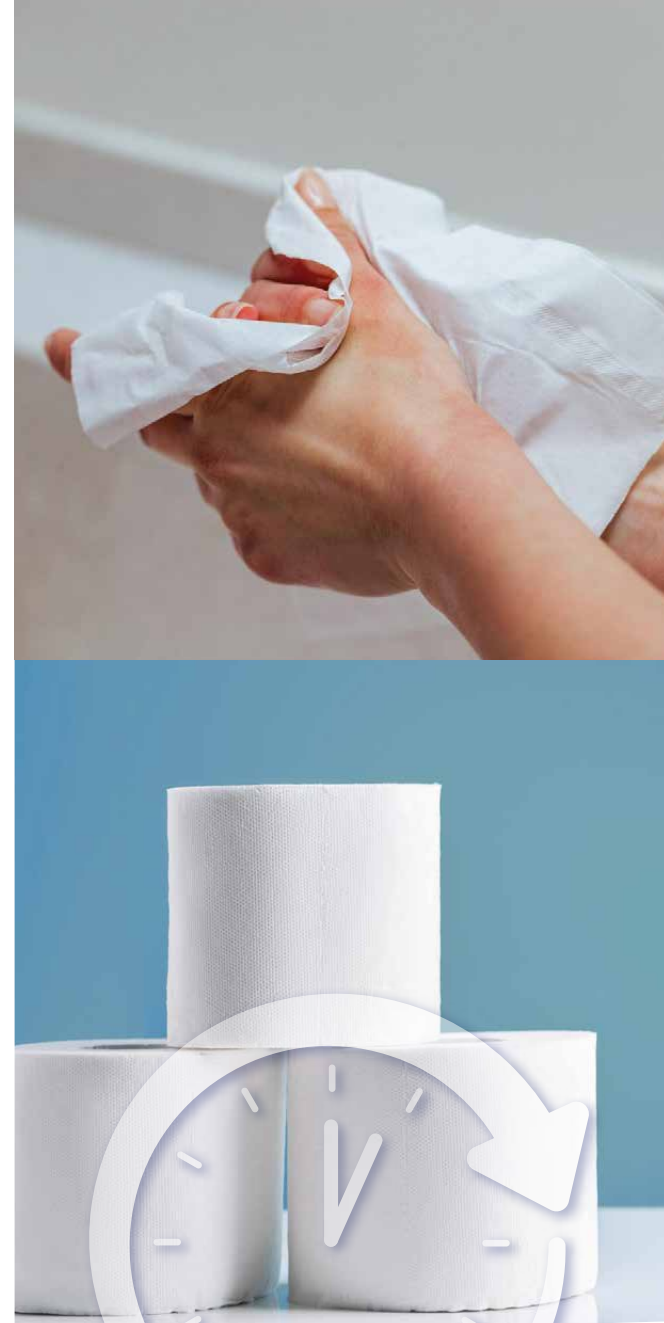

## BEYOND EXPECTATIONS

Our commitment to quality, thorough research, careful selection of raw materials, and the creation of blends specifically crafted with dedicated fibers have allowed us to surpass expectations, giving rise to a range of products branded as **EXTRA FAST DISSOLVING TISSUE**.

**EXTRA FAST DISSOLVING TISSUE** is a selected range of products made with specific papers, ideal especially for the most problematic drains, where there are twisted, short, narrow pipes or with little slope.

Extra Fast Dissolving Tissue products dissolve in **ULTRA-FAST TIMES** upon contact with water, while maintaining high levels of strength and absorbency.

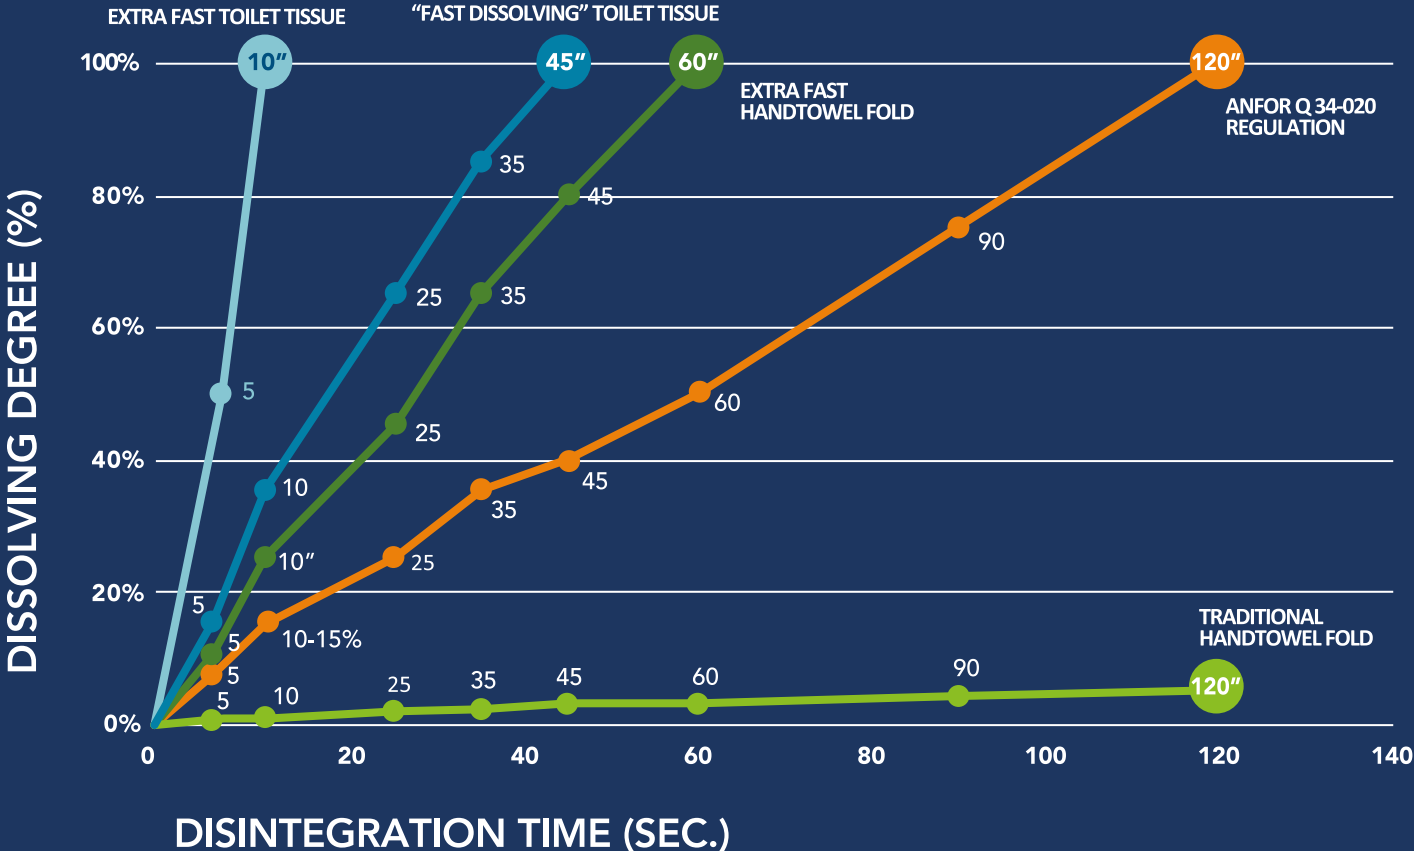

- **Toilet papers** dissolve **within 10 seconds** upon contact with water;
- **Folded towels**, if accidentally flushed down the toilet, dissolve **in less than 1 minute**.

The graph illustrates the relationship between the dissolving degree and the disintegration time of various product types:

- Standard "fast dissolving" toilet paper
- Extra fast dissolving toilet paper
- Standard folded towels
- Extra fast dissolving folded towels

The dissolution times are compared with the timelines established by the AFNOR Q34-020 REGULATION. This provides a key for an immediate comparison between different product types and their compliance with industry standards.

## **EXTRA FAST DISSOLVING TISSUE** is synonymous with:

**EXCELLENT PERFORMANCE:** ultra-fast dissolution times upon contact with water while maintaining maximum absorbency and strength during use;

**COST SAVINGS:** Reduction in regular maintenance time and direct and indirect intervention costs;

**SATISFIED CUSTOMERS:** thanks to the reduction of pipe blockages, bathrooms will always be in order and functioning without any service interruptions;

**MAXIMUM QUALITY:** products crafted from carefully selected and certified raw materials;

**SAFETY:** products made from specific raw materials, specially designed with selected fibre combinations; processed on dedicated transformation lines and subjected to stringent quality controls to always ensure maximum performance standards;

**VERSATILITY:** products suitable for all contexts. Ideal for use on trains, ships, campsites, beach resorts, and in places with non-linear, narrow, and low-slope pipes;

**ECO-FRIENDLY:** reduces the use of chemicals for regular pipe maintenance, and all products are made with Ecolabel and PEFC certified paper;
