NAPKINS

ESSENTIA systemone NAPKINS

Essentia SystemOne Napkins is a dispensing system for interleaved napkins included with a range of dispensers designed to meet the requirements of food consumption areas that see medium to high footfall.

Guaranteed hygiene

The dispenser system ensures that the product only comes into contact with the direct user, thus minimising the risk of cross contamination.

Controlled dispensing: Optimised consumption

As well as ensuring improved hygiene and increased practicality, the controlled dispensing of the napkins ensures that consumption (and thus waste) is reduced by at least 30% compared with conventional napkins. The ease and speed with which the product can be reloaded and the increased capacity of the system add to the savings in terms of time and running costs.

The controlled dispensing system – combined with products made from fully certified paper – offers an environmentally friendly solution which is perfect for any setting where a customer wishes to build or maintain a green ethos.

A comprehensive range covering multiple needs

The combination of dispensers in different formats and an array of napkin types enables us to satisfy any requirement in terms of consumption, management and service, in many different sectors and areas.
